

# Data in, privacy out

## Data streams for the privacy age

@robintrietsch & @pimnauts

# Today

sections:

- "Learning how to build for privacy"
- "An architecture to shift left with data privacy"
- "(our) solution!"

May 25th 2018

# The Cost of Privacy

Coordination, regulation limit  
velocity, innovation

Retaining data utility...

Data teams carry ultimate  
responsibility

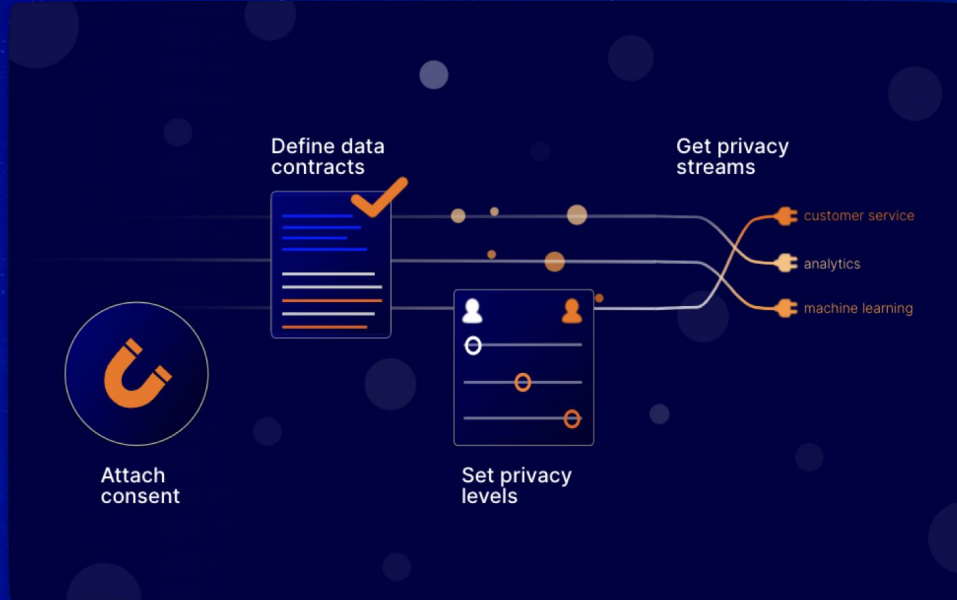

# Towards privacy by design for data

Beyond privacy as an access or data sharing problem

- Explicit beats implicit data structure (**data contracts**)
- Shift left to encode privacy at data collection
- Privacy-transform before any ETL/ELT, retain utility.
- Purpose-binded interfaces (**privacy streams**)
- Make it interoperable && fast

# Data in, privacy out

1. Explicit data contracts
2. “Encode” privacy
3. Privacy-transform before anything else
4. Provide privacy streams.

# Explicit data structure

Data shape  
(fields)

Schema

Privacy  
implications

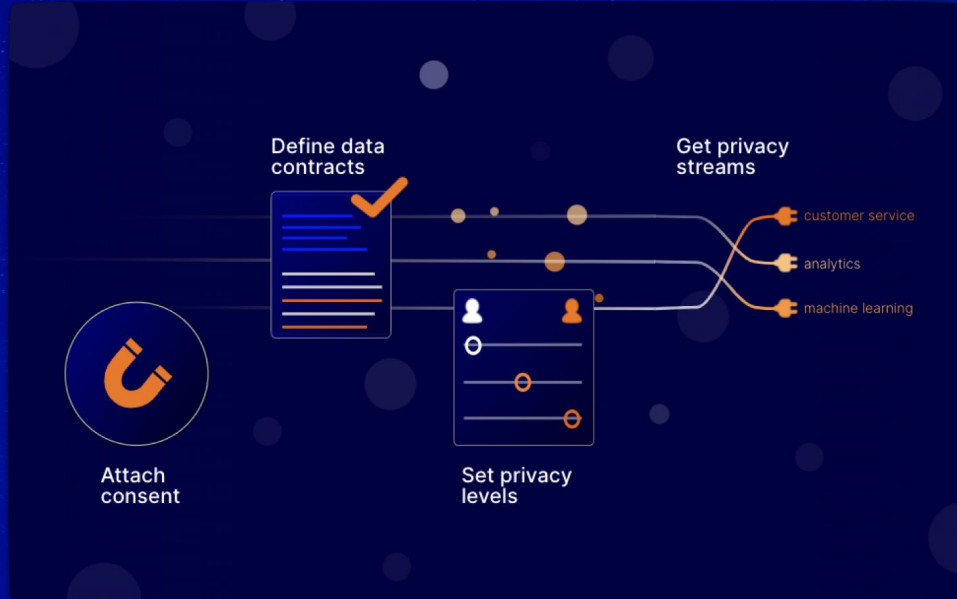

Event Contract

  },
  "validations": [
    {
      "field": "sessionId",
      "type": "regex",
      "value": "^[0-5]{4}-[5-9]{4}$"
    }
  ],
  "metadata": {
    "title": "STRM privacy Webshop Clickstream"
  }
}

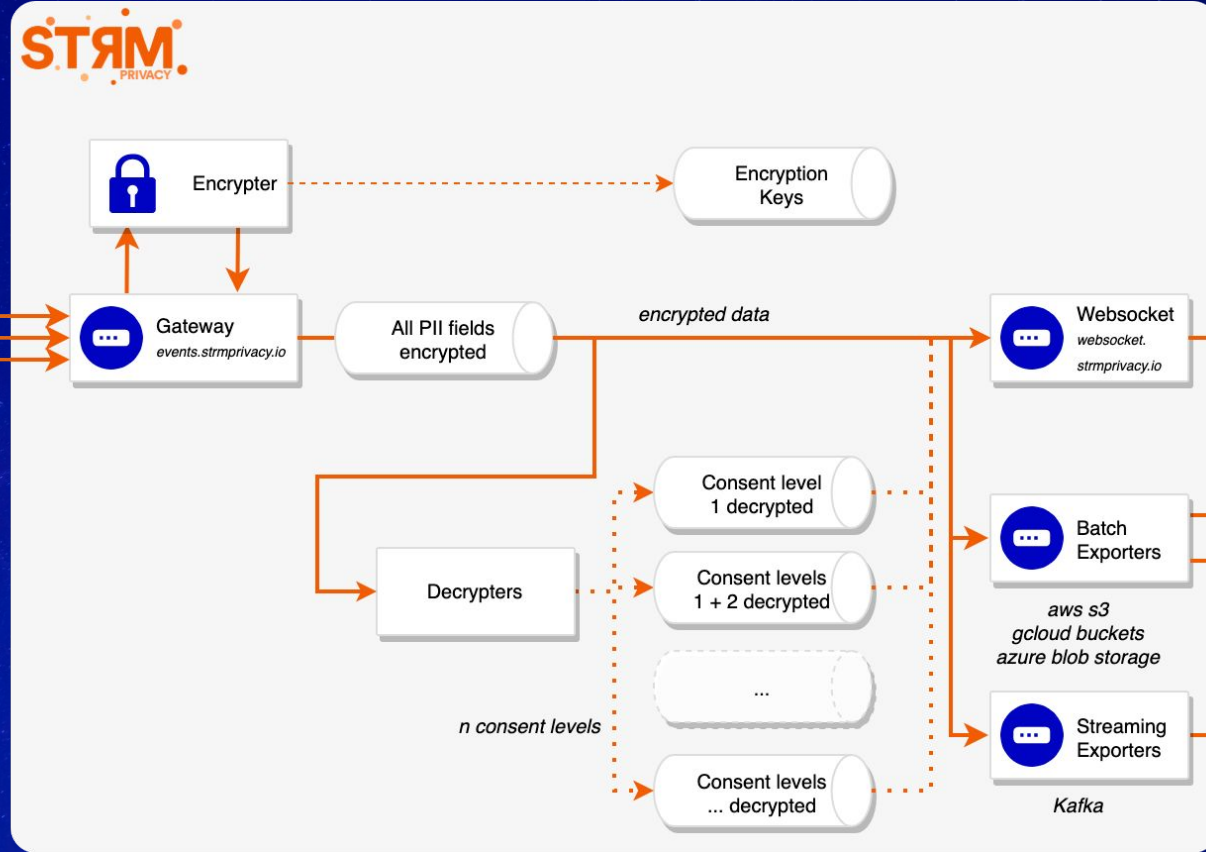

```

# Data in, privacy out

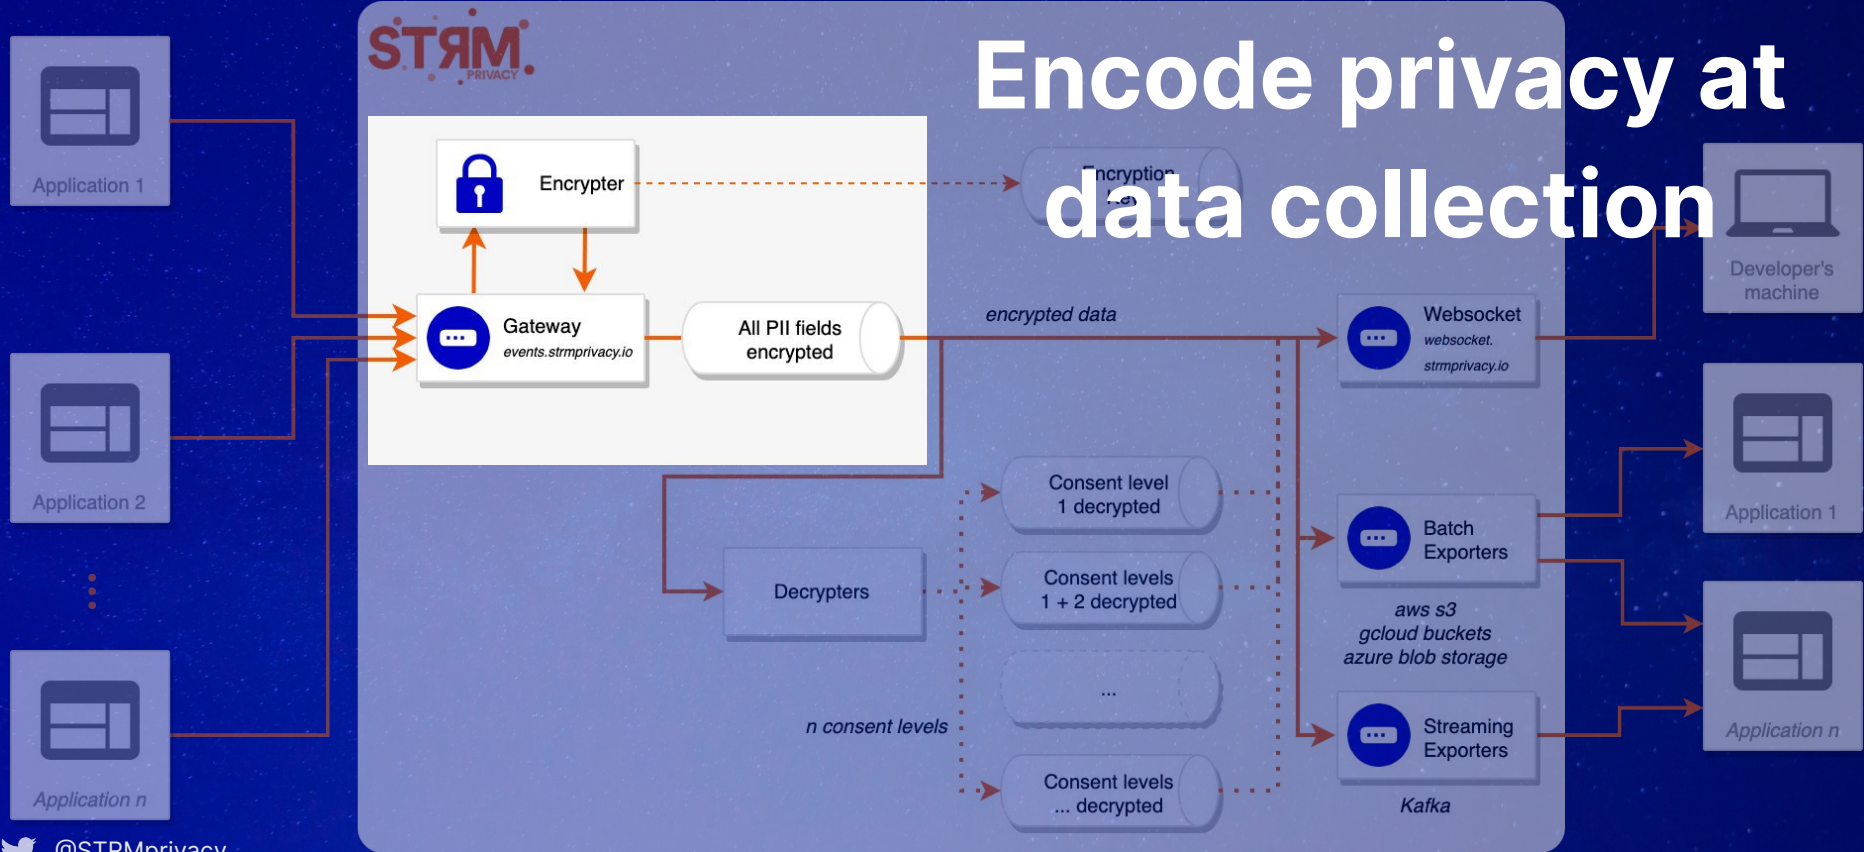

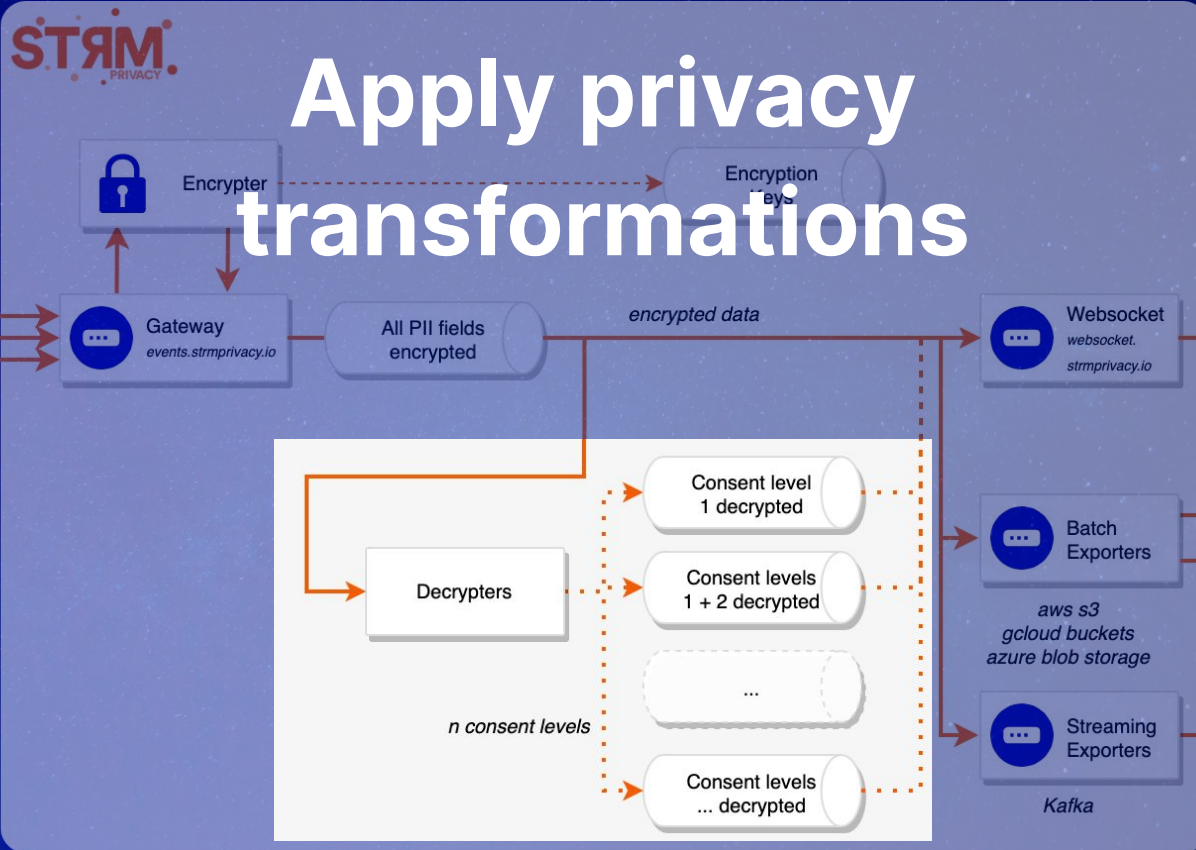

1. Explicit data contracts
2. “Encode” privacy
3. Privacy-transform before anything else
4. Provide privacy streams.

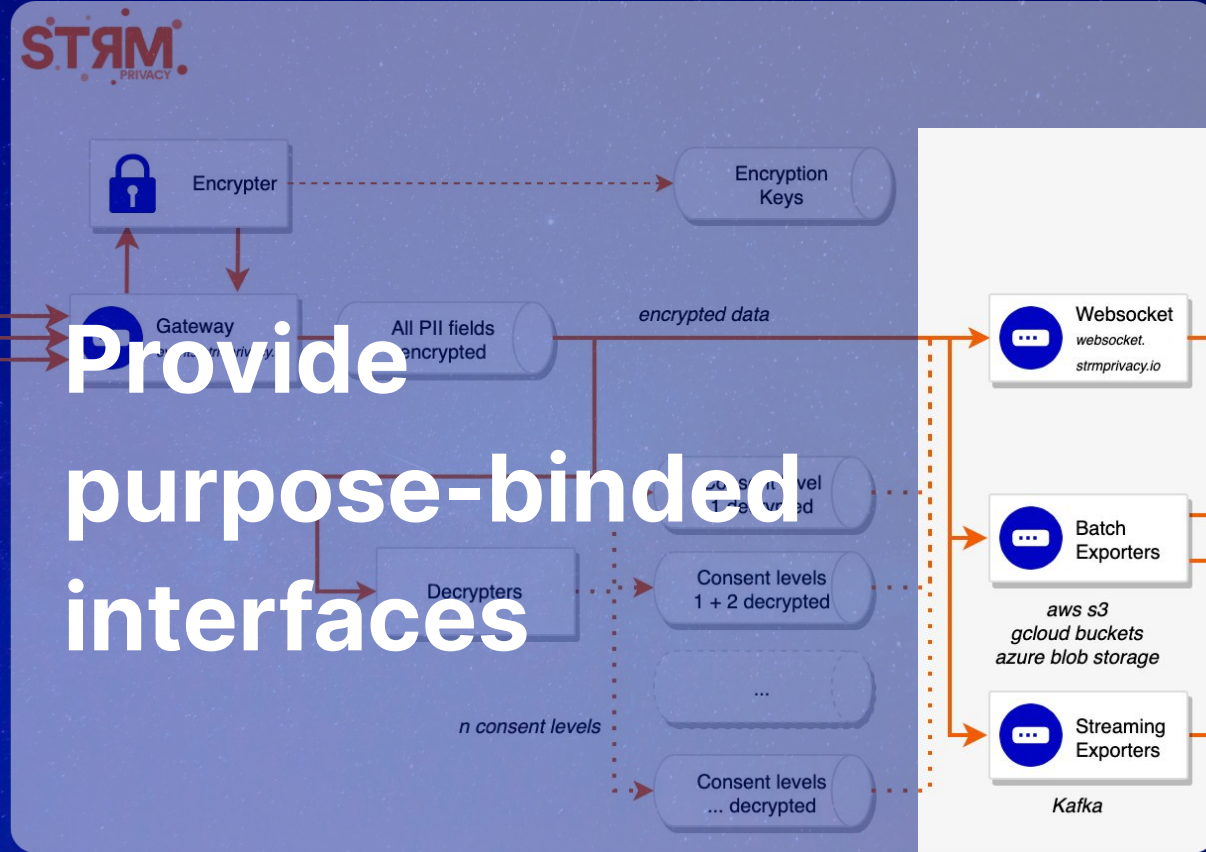

# Encode privacy at data collection

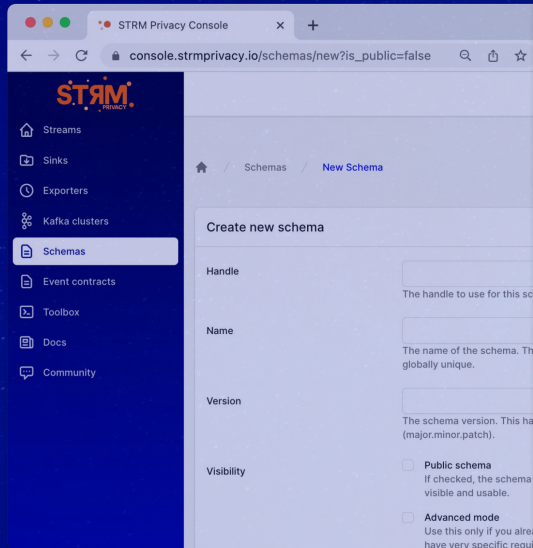

**Provide  
purpose-binded  
interfaces**

# Manage + integrate

Integrate

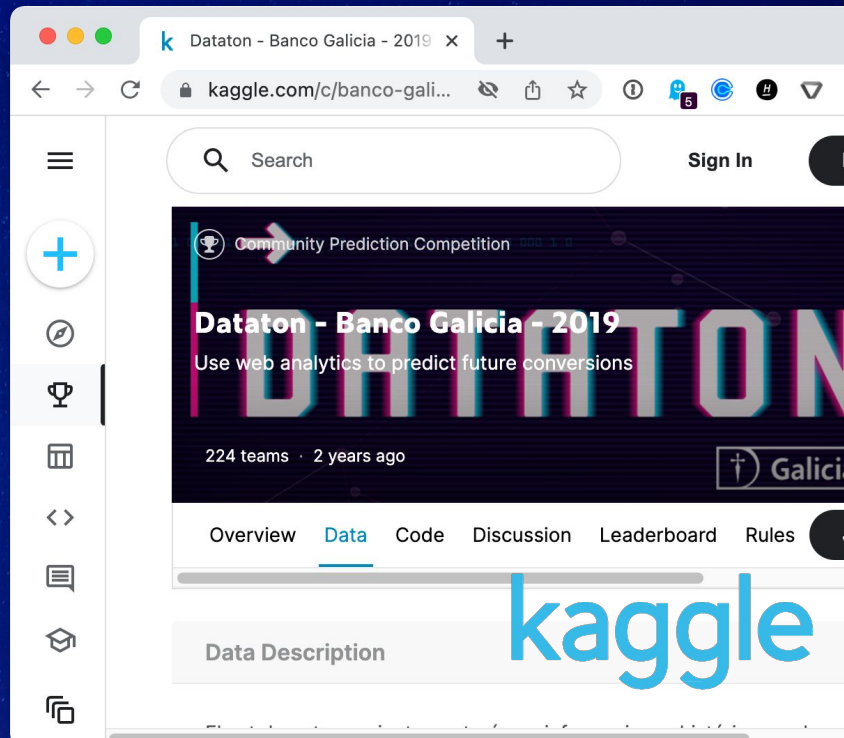

SDKs

Demo

Visualize on real-time  
privacy streams

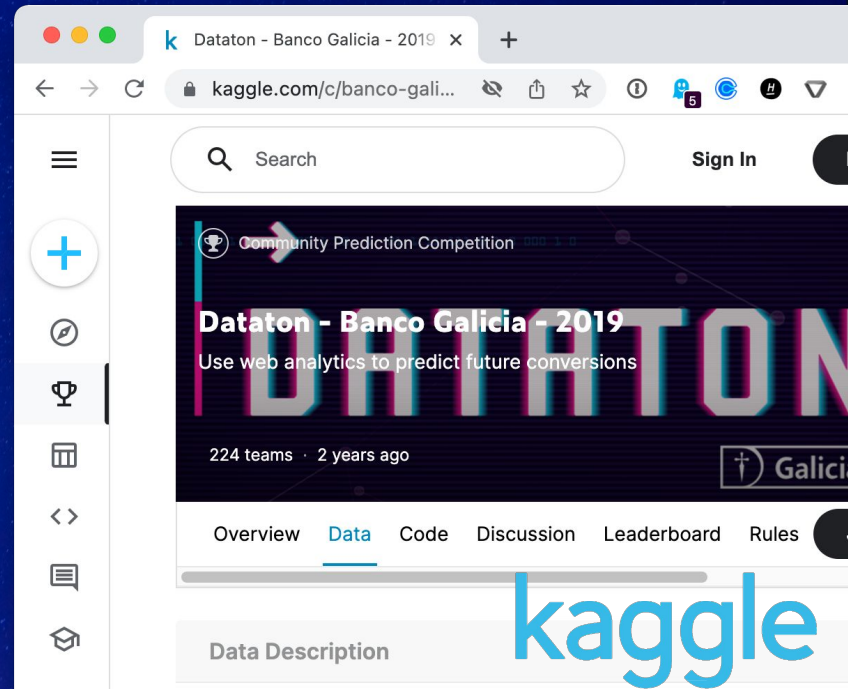

# Banco Galicia clickstream

## Clickstream Session Data

1. Create a data contract
2. Data replay to simulate a stream
3. Real-time data visualization

**All with real-time anonymization  
on (PII) data.**

## Customer use cases

- Predict on real-time anonymized streams (search, recsys) < demo
- Operational analytics in sensitive domains (e.g. mobility)
- Low-latency, high-volume external data sharing (e.g. health sensor/IoT)
- Structured privacy (privacy policy 🧡 data processing)

## Summary

- Insert data privacy before any downstream usage or storage.
- Encode privacy policies into data through **data contracts**
- Align privacy policy 🍷 data processing in one go.
- Distribute purpose-driven data interfaces through **privacy streams**
- All in real-time if necessary (and batch, too 😊)
